

I am a subscriber to XM satellite radio and this is in regard to NAB's petition 04-160. I urge you to reject this petition. I find that the services XM provides on weather and traffic is of great help when I am traveling and need this information. This information is not easily available on other radio stations if you are in an unfamiliar area and from a safety standpoint it is vital to have this information. As important, the NAB seems to be trying to limit this service for their own profit motives and stepping on the freedom of speech that they usually advocate when it is to their advantage.
